This pioneering 1997 study examines the economic development of the British paper industry between 1860 and 1914 - an era in which it is often claimed that the origins of Britain's relative economic decline are first witnessed. For paper-making, this was also a period in which an array of important new forces, including inter alia the development of new raw materials and the move to ever larger scales of production, came on the scene. Gary Bryan Magee looks at the effect of these changes and assesses how effectively the industry coped with the new pressures, drawing upon an extensive range of quantitative and archival sources from Britain, America, and other countries. Along the way, Dr Magee addresses issues central to the understanding of industrial competitiveness, such as technological change, entrepreneurship, productivity, trade policy, and industrial relations. Every day millions of us sit in front of a computer screen tapping away at a keyboard, mostly writing virtual notes to unseen correspondents. By contrast, an origami project is a chance to be creative and make something tangible; in fact, turning a piece of paper into a three-dimensional sculpture is a meditative journey that instills in us a sense of pride, competence, and accomplishment. As we fold the paper, the focus required and the tactile connection help free our minds to roam, creating the opportunity for a moment of self-reflection, for true presence of mind. Explains the methods and knowledge to understand how and why paper was used in medieval writing and beyond.
